

Project Design Phase-II Data Flow Diagram & User Stories

Date	05-07-2026
Team ID	SWTID-2026-8108
Project Name	Heart Disease Analysis
Maximum Marks	

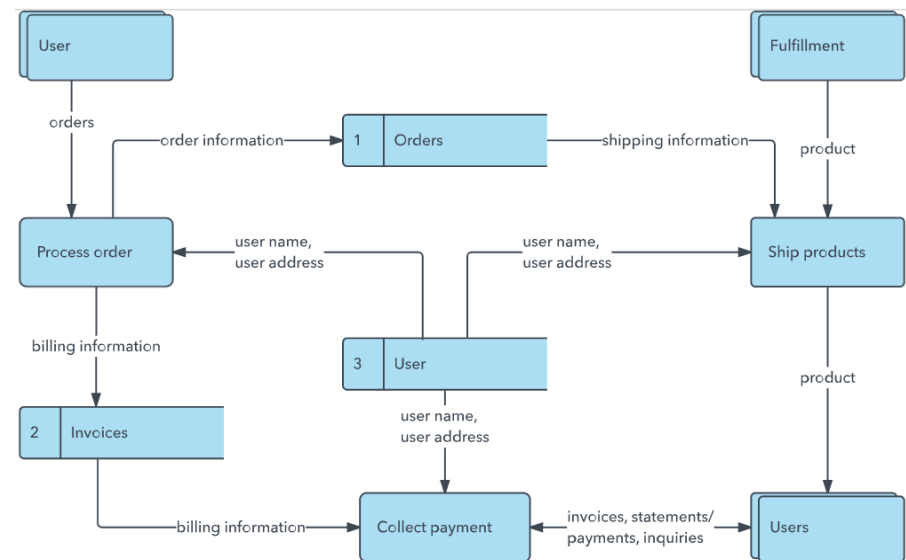

Data Flow Diagrams:

A Data Flow Diagram (DFD) is a traditional visual representation of the information flows within a system. A neat and clear DFD can depict the right amount of the system requirement graphically. It shows how data enters and leaves the system, what changes the information, and where data is stored.

structure:

Example: DFD Level 0 (Industry Standard)

User Stories

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance criteria	Priority	Release
Clinician (<i>Dr. Sharma</i>)	Clinical Risk Analytics	USN-1	As a clinician, I want to filter the patient population by age, gender, and smoking status simultaneously so I can instantly isolate high-risk groups.	The chart filters dynamically inside Tableau when multiple criteria are selected.	High	Sprint-1
		USN-2	As a clinician, I want to see a clear correlation matrix between high BMI levels and diabetes diagnoses.	A dashboard worksheet clearly shows average BMI variations across diabetic status bands.	Medium	Sprint-1
Policymaker (<i>Ramesh</i>)	Socio-Demographic Insights	USN-3	As a health policy analyst, I want to compare heart disease prevalence rates between urban and rural geographic segments.	The dashboard displays a side-by-side or mapped demographic split of regional metrics.	High	Sprint-1
		USN-4	As a health policy analyst, I want to cross-examine sedentary lifestyle indicators against disease trends to back up workplace fitness rules.	A clear visual display maps physical activity levels directly against cardiovascular diagnosis counts.	High	Sprint-2
Individual Patient (<i>Anita</i>)	Personal Preventive Care	USN-5	As a patient with a family history of heart disease, I want to view my individual medical numbers alongside healthy standard benchmarks.	Color-coded visual benchmark gauges show whether a metric is in a "Healthy" or "High-Risk" zone.	High	Sprint-1

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance criteria	Priority	Release
Database Administrator	Relational Data Management	USN-6	As a data administrator, I want to host all 4,416 rows and 18 columns securely in a local MySQL instance using the InnoDB engine.	Large aggregate query calculations run smoothly and feed into Tableau in under a few seconds.	High	Sprint-1
